

Software Developer Internship

We are looking for a programmer to be part of the development team, an autonomous person with interest is required, who is able to contribute ideas to the team to arrive at solutions together.

Communication, the desire to learn and self-managing are very important, as each project brings new challenges.

The basic functions would be creating appealing GUIs using HTML5 and CSS, as well as coding the necessary related actions and understanding the whole **Model-View-Controller** scheme.

Testing and bug-fixing is also a fundamental part of the work.

Required skills:

- MySQL/SQLServer
- Experience with any Object-Oriented Language
- Git
- HTML
- CSS

Valuable perks:

- Twitter Bootstrap
- PHP
- Javascript, and js extensions (jQuery/Angular...)
- Frameworks (Yii2/laravel/symphony...)
- Basic experience with Unix systems
- Creation of Ajax requests, client-server communications
- Understanding the concept of APIs
